

Leatt Medallion Architecture

Dirty Bronze data to trusted Silver and Gold reporting tables in Microsoft Fabric

Leatt Fabric Medallion Architecture

Dirty source data is kept, cleansed, conformed, then published as governed Power BI-ready Gold tables.

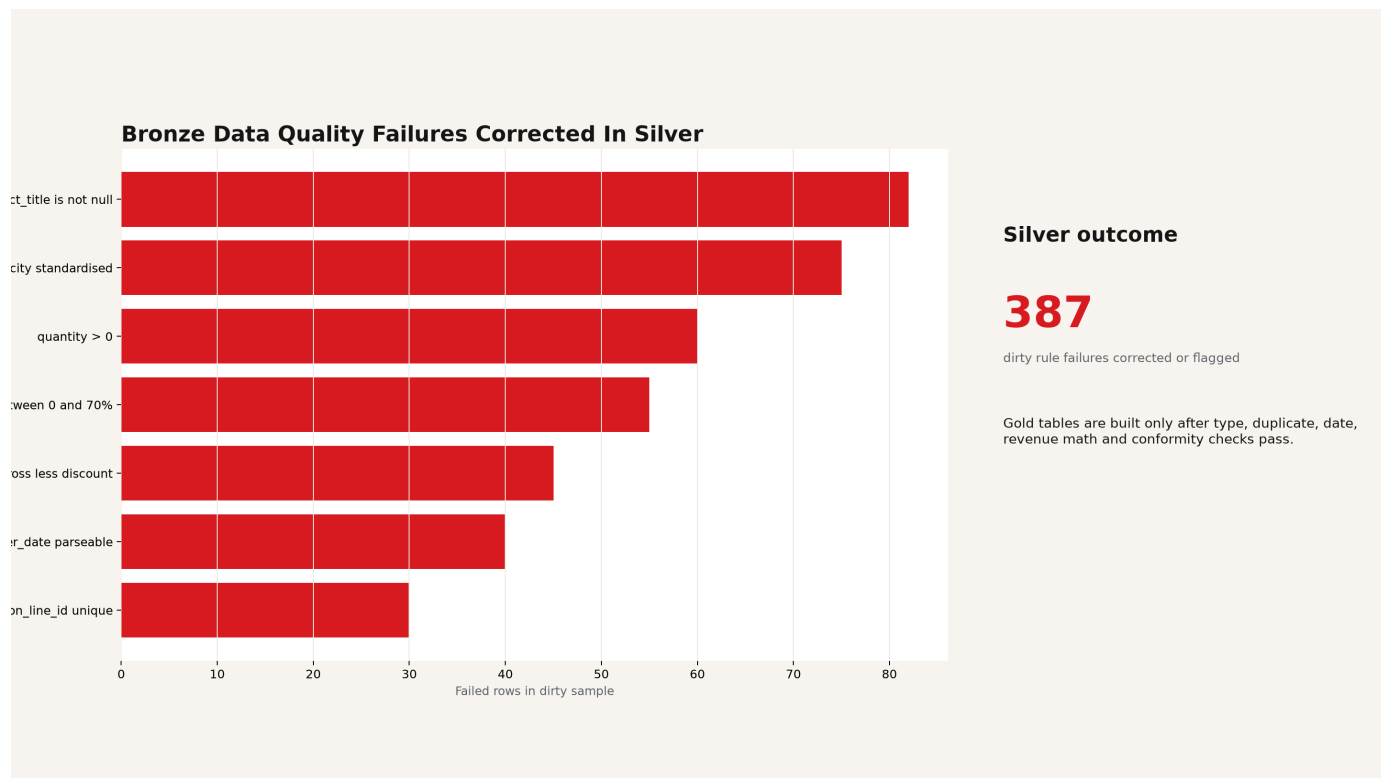

Quality gates

product_title is not null: 82 fixed | quantity > 0: 60 fixed | discount_pct between 0 and 70%: 55 fixed | order_date parseable: 40 fixed | net revenue equals gross less discou...

Audit pattern: Bronze preserves source evidence, Silver records correction logic, Gold contains trusted measures for reports and finance.

1. Why It Matters

A serious BI project must prove how messy operational data becomes trusted analytics. This pack shows the exact Bronze, Silver and Gold pattern used for ecommerce, SAP/accounting and Power BI reporting.

2. Quality Rules

Dimension	Rule	Bronze failures	Silver action
Completeness	product_title is not null	82	Fixed in Silver with Unknown Product mapping queue
Validity	quantity > 0	60	Fixed by absolute quantity and minimum one unit
Validity	discount_pct between 0 and 70%	55	Clipped to business-approved discount ceiling
Validity	order_date parseable	40	Defaulted to exception date and flagged for source correction
Accuracy	net revenue equals gross less discount	45	Recalculated in Silver
Uniqueness	transaction_line_id unique	30	Deduplicated in Silver on transaction_line_id
Conformity	province/city standardised	75	Trimmed and title-cased in Silver

3. Gold Tables

Gold outputs are business-facing marts, not raw extracts. They are designed for Power BI, ML features and finance reconciliation.

Category	Revenue	Margin	Margin rate	Return rate
Apparel	R4.3m	R2.2m	51.8%	9.7%
Body Protection	R1.7m	R759,294	45.5%	4.9%
Footwear	R1.2m	R456,999	39.2%	10.1%
Helmet	R1.2m	R475,053	41.1%	1.6%
Gloves	R817,772	R437,715	53.5%	5.0%
Parts & Accessories	R268,147	R150,594	56.2%	3.9%
Goggles	R212,129	R105,552	49.8%	2.1%
Other Gear	R197,347	R93,103	47.2%	1.2%

Fabric implementation: Data Factory copies raw files to Bronze, Fabric Lakehouse/Dataflow Gen2 cleans to Silver, SQL views create Gold, Power BI consumes Gold, and Git stores the scripts and proof.
