

Senior BI Developer Role Alignment

Senior Business Intelligence Developer role requiring Microsoft Fabric, Azure Data Factory, Power BI, SQL, DAX, Python/R, AI-driven BI, governance, security, stakeholder leadership, training, international delivery, and enterprise-grade analytics architecture.

Executive Fit

The Leatt Fabric BI/ML case study demonstrates senior-level delivery across data engineering, BI, ML, governance, SAP/accounting integration, stakeholder reporting, and Git-controlled proof.

Requirement Matrix

Capability	Evidence	Coverage
End-to-end data architecture	Fabric architecture guide, Data Factory pipeline blueprint, Lakehouse/Warehouse SQL, Git export guide.	High
Data warehouse and data lake design	Bronze/Silver/Gold model, OneLake/Lakehouse design, SQLite warehouse design, Parquet fact table, gold SQL views.	High
Power BI dashboards and DAX	Excel/Power BI-ready semantic model, DAX measures, executive/category insights.	High
AI-driven BI	ML customer propensity, value segmentation, forecast model, AI roadmap.	High
Data engineering and orchestration	Python extraction/generation scripts, Fabric Data Factory plan, REST extraction design, SAP/Shopify source mapping.	High
Governance, security and compliance	Data governance policy, control matrix, audit exceptions, PII minimization.	High
Azure and Power BI administration	Azure credit plan, Fabric capacity guidance, pause/monitor capacity, Git/deployment pipeline plan.	High
Stakeholder consulting	Executive ebook, growth pack, SAP/accounting pack, competitor/SEO/marketing insights.	High
Training and knowledge sharing	Workshop plan, demo agenda, handover checklist, Git proof checklist.	Medium/High
Mentorship and continuous improvement	Code repo, documentation, reproducible scripts, QA checks, source register.	Medium/High
SQL, DAX, Python and R	Python pipelines, SQL gold model, DAX measures. R not used in this build.	High for SQL, DAX, Python, Medium for R.
Finance, sales and business domains	Finance reconciliation, VAT, GL demo, marketing ROI, sales/product/customer finance and sales	High for finance and sales
International/global project readiness	Regional ZA Shopify storefront, global Leatt brand context, SAP/Shopify/Reddit proof of concept architecture.	Medium/High

Interview Talking Points

Opening summary: I built a full ecommerce BI and ML case study around Leatt ZA, starting from live platform research and public catalog extraction, then created a million-row fact model, Power BI-ready measures, ML scoring, finance reconciliation, governance and Git proof.

Fabric architecture: I would deploy this into Fabric using Data Factory for REST ingestion, OneLake/Lakehouse for Bronze and Silver, Warehouse or SQL endpoint for Gold, Power BI Direct Lake for reporting and Fabric Data Science for scoring.

Business value: The project moves beyond dashboards: it includes A/B testing, marketing ROI, SEO, competitor research, AI use cases, VAT reconciliation, audit controls and SAP integration design.

Governance: I built a source register, data controls, audit exception register, PII minimization notes, row-count proof and Git-controlled documentation to make the solution auditable.

SAP and ecommerce: The live site appears to run on Shopify. SAP Commerce Cloud/Hybris is not evidenced for this storefront, but SAP Business One or SAP BW can be used as finance/accounting sources of record.

Scale proof: The generated warehouse has 2,000,000 transaction rows, 180,000 customers and 11,354 product variants, with proof docs and file hashes where practical.

Leadership: The deliverable is structured so a team can extend it: scripts, Git history, export docs, control matrix, architecture diagrams and workshop materials.

Training And Handover Plan

Session	Theme	Purpose	Audience
Session 1	Business briefing	Walk through executive KPIs, growth levers and stakeholder expectations.	Executives, sales, finance
Session 2	Data platform	Explain Fabric, Data Factory, Lakehouse, Warehouse, Power BI and Git export flow.	Product and
Session 3	Model and DAX	Review star schema, DAX measures, semantic model and report layers.	Power BI players
Session 4	ML and AI	Review propensity, segmentation, forecast, recommendation, analytics/Assist	AI team
Session 5	Finance and governance	Review VAT, GL reconciliation, SAP source mapping, audit exceptions, and controls.	Finance, product, and compliance
Session 6	Handover	Review repo, scripts, manifests, deployment checklist, onboarding and next backlog.	Project team

Gap Plan

Gap	Current state	Next step	Priority
R language	Not used in this build.	Add an R notebook for statistical A/B test validation and forecast comparison.	Low
Power Apps	Power Platform is represented through Power BI/Power Apps issues and guidance, but no app is built.	Add a Power Apps issue and guidance, but no app is built.	Medium
Power Automate	Automation is covered as design guidance.	Create flow spec for exception notification and refresh.	Medium
Real order data	Only public catalog data and synthetic transactions are used.	Obtain authorized Shopify Admin/API, SAP B1 or BW data feeds.	High
Live Fabric export	Local Git-proof package exists; portal export from Fabric added after works in local build.	Export from Fabric added after works in local build.	High
Certifications	The package shows practical skill, not credentials.	Complete Microsoft certifications separately in CV.	Personal
