Merchandising and Governance

Intelligent Merchandising And Governance

Governance Promise

Every recommendation is tied back to:

- source register
- row counts
- OneLake path
- ERD
- Git commit
- cost control note

What The Data Tells Us

Theme	Insight
Scale	The modeled ecommerce estate is large enough for enterprise BI: R3,994,247,413 revenue and R1,938,497,252 gross margin across the analytical period.
Category economics	Apparel is the hero growth engine at R1,759,430,045; it deserves board-level tracking, product storytelling and protected availability.
Margin leakage	Returns absorb 4.9% of modeled revenue, with Footwear carrying the highest return-rate signal. Fit, sizing, delivery promises and PDP content should be inspected before scaling spend.
Marketing efficiency	Direct is the efficiency engine with ROAS 100.0x. Paid channels should be optimized with creative testing, landing-page relevance and bundle-led offers before budget expansion.
Merchandising action	Jacket ADV FlowTour 5.5 - Women is a strong margin candidate for bundles, recommendations and attach-rate testing.
Monitoring	2025-12 moved 12.6% versus the 3-month signal and should be explained in the trading pack.
Governance	Every insight is tied to a source register, row count, ERD, OneLake upload path, Power BI semantic model and Git commit so the work can survive audit review.
