

Accounting Reconciliation, Data Auditing, Governance and SAP Source Design

Finance-grade extension for the Leatt ecommerce BI/ML case study. This is a demo reconciliation model, not statutory financial statements.

Executive Position

Use SAP Business One or SAP BW as the accounting/finance system of record where available.

Use Fabric Data Factory/Lakehouse/Warehouse for extraction, reconciliation, governance checks and Power BI reporting.

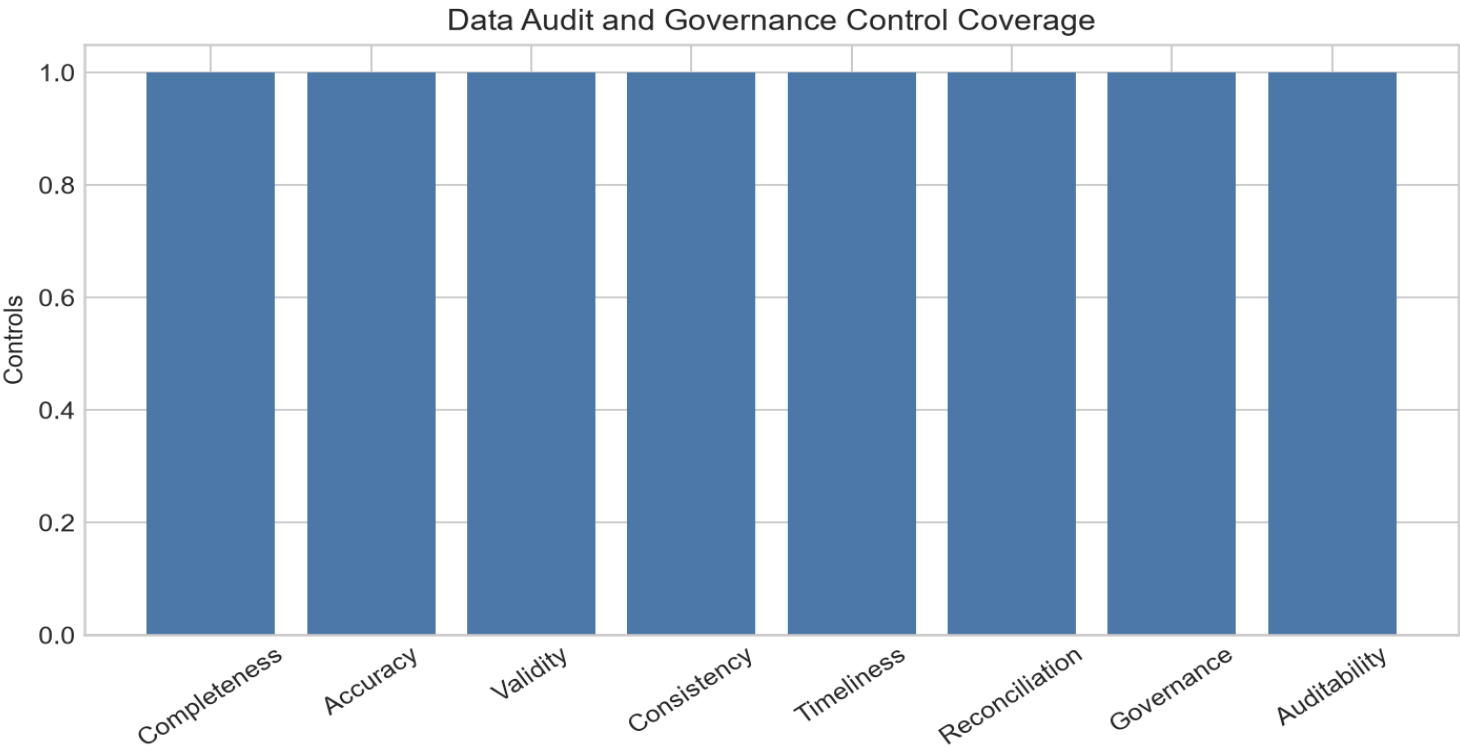

Treat ecommerce/web data as operational source data until posted and reconciled to SAP finance.

SAP Hybris, now SAP Commerce Cloud, is optional and fits upstream as an ecommerce platform source, not as the final ledger.

SAP Source Mapping

System	Object	Use	Extraction
SAP Business One	OINV / Invoices	Invoice header and customer totals	Service Layer /b1s/v2/Invoices
SAP Business One	INV1 / InvoiceLines	SKU, quantity, price, VAT code, warehouse	Service Layer expands DocumentLines
SAP Business One	ORIN / CreditNotes	Returns and VAT reversals	Service Layer /b1s/v2/CreditNotes
SAP Business One	ORCT / IncomingPayments	Cash receipts and payment allocation	Service Layer /b1s/v2/IncomingPayments
SAP Business One	OJDT / JournalEntries	Posted accounting entries	Service Layer /b1s/v2/JournalEntries
SAP Business One	OACT / ChartOfAccounts	GL account mapping	Service Layer /b1s/v2/ChartOfAccounts
SAP Business One	OCRD / BusinessPartners	Customer master data	Service Layer /b1s/v2/BusinessPartners
SAP Business One	OITM / Items	Item master and inventory mapping	Service Layer /b1s/v2/Items
SAP BW	BEx Query / CDS Query	Finance actuals, sales cubes, inventory, profitability	SAP Gateway OData query
SAP Commerce Cloud / Hybris	Orders / Customers / Products	Digital order, product, promotion and customer journey	OC4S / B2C Integration APIs / Data Hub

Controls and Governance

Area	Control	Owner	Frequency
Completeness	Daily row count control	Finance Ops	Daily
Accuracy	VAT recalculation	Revenue Accountant	Daily
Validity	SAP document existence	SAP Analyst	Daily
Consistency	SKU and GL mapping	Data Steward	Weekly
Timeliness	Pipeline SLA	BI Engineer	Daily
Reconciliation	Sales-to-bank control	Finance Ops	Daily
Governance	PII minimization	Data Owner	Monthly
Auditability	Immutable evidence	Data Governance Lead	Monthly close

SAP Hybris / SAP Commerce Cloud Fit

Question	Answer
Is it needed?	No, not for this current Leatt demo. The website/catalog and synthetic transaction model are enough for BI/ML proof.
Is it possible?	Yes. SAP Hybris is now SAP Commerce Cloud and can act as the ecommerce/order/catalog source if the business runs commerce on SAP.
Where it fits	Upstream commerce platform before ERP/accounting. It feeds orders, carts, customers, products, promotions and pricing into Fabric and SAP B1/ERP.
Accounting role	Not the final accounting ledger. Use SAP Business One/SAP ERP/SAP BW for statutory finance, GL, VAT, payments and inventory postings.
Analytics role	Excellent source for customer journey, product catalogue, promotions, search, abandoned cart, order lifecycle and personalization analytics.
Integration	Use OCC APIs, Integration APIs, Data Hub/Integration Suite patterns, or exported order/product feeds into Fabric Data Factory.
